
This direct vent system is designed and approved for use only with the non-condensing tankless water heaters, model numbers **110C**, **310C**, and **510C**.

**General Guidelines**

**WARNING:** Property damage, personal injury or death can result if the vent system is not installed properly. *Direct vent system* installation instructions are a guide for professional installers generally familiar with the installation and maintenance of heating equipment and related vent systems.

All installations must conform to all relevant Local, State and National codes. In the US: National Fuel Gas Code **ANSI-Z223.1, NFPA 54, NFPA 211**. In Canada: **CAN/CGA-B149.1** or **CAN/CGA-B149.2**. Permits may be required before an installation can begin. Before installation, each vent component must be inspected for possible shipping damage and correct seal placement. These installation instructions must be read, understood and complied with.

As part of regular equipment maintenance, check for vent system integrity and blockage.

Refer to the appliance manufacturer’s installation instructions for clearance to combustibles, terminations, and maximum allowable vent length.

**Do not mix with other vent manufacturer’s products.**

Appliances can be operated immediately after a vent system is installed and inspected.

---

**WARNING**

Improper installation of vent system and components, or failure to follow all installation instructions, can result in property damage or serious injury.

---

**Manual Contents:**

1. Read and Follow Appliance Manufacturer’s *Direct Vent System* Instructions
2. Vent Termination Clearances
3. Shorten Sections
4. Secure Joints
5. Vent System Layout
6. Maintain Proper Slope
7. Drain the Condensate
8. Provide Adequate Support
9. Side Wall Termination Installation
10. Vertical Termination Installation
11. Components

**1. Read and Follow Appliance Manufacturer’s *Direct Vent Systems* Instructions**

- Installation and maintenance instructions for these *direct vent systems* are packaged with the main components (horizontal / vertical terminations).
- Accessories can be installed according to common building practice.
- If you have questions regarding the water heater, contact technical service at 1-877-737-2840.
- If you have questions on correct vent installation, contact Centrotherm Eco Systems (877.434.3432 or info@centrotherm.us.com)
2. Vent Termination Clearances

<table>
<thead>
<tr>

<td>1' (30 cm)</td>
</tr>
</tbody>
</table>

*For clearances not specified in ANSI Z223.1 / NFPA 54 or CAN/CSA-B149.1, please use clearances in accordance with local installation codes and the requirements of the gas supplier.
3. Shorten Sections

- The inside pipe should always extend \(3/8\)" (10 mm) – \(1/2\)" (13mm) beyond white outside pipe on the male end of the vent extension.
- Always cut the male end of the vent pipe extension. **Do not attempt to cut the female end.**
- Inner and outer pipes **must be** cut perpendicular to assure proper seal.
- Cut inner pipe with fine tooth metal saw (hack saw).
- **Deburr both** air intake (outer) and exhaust (inner). Failure to do so may result in gasket damage.

4. Secure Joints

- Gasket is pre-lubricated. **DO NOT** use any oil, grease, or other lubricant.
- Insert the tapered male end into the flared female end using enough pressure to completely seal the connection.
- **DO NOT** attempt to make up length by joining sections partially.
- **DO NOT** use screws or pop rivets when joining these direct vent systems. Use only the included latch.
5. Vent System Layout

6. Maintain Proper Slope
   - Install with a continuous 3° (minimum) slope to drain the condensate properly.
7. Drain the Condensate

- Follow the appliance manufacturer’s instructions included with the heater to determine if condensate drain is required.
- The drain should be as close to the appliance flue collar as possible.
- Can be used in vertical orientation only.
- **DO NOT** install drains in areas that could experience temperatures below freezing.
- Condensates can be caustic. Neutralize and/or drain in accordance with local code requirements.
- Clean trap annually.

**WARNING:**
Always assure drain line stays below the level of the condensate collector drain outlet.

Failure to do so can cause caustic condensates to damage appliance or condensate collector.

8. Provide Adequate Support

- On horizontal runs, support the direct vent system every section and after each elbow or offset.
- On vertical runs, support the direct vent system at a minimum of every 6’ (1.82 m) of vertical rise at each floor penetration, and at the roof penetration.
- **DO NOT** rest weight of direct vent system on the appliance.
- Perforated hanger iron can be used only on horizontal runs.
9. Side Wall Termination

**Horizontal Concentric Vent System**

**Identify the Vent Location**
- Place the 87° vent pipe elbow on the appliance
- Mark the position on wall taking into account 3° pitch
- Cut hole, covering the top of the appliance to prevent debris from entering

**Final Installation of Vent System**
- After cutting the appropriate length, position the outer wall plate and slide the horizontal termination through the hole in the wall. Position the inner wall plate around the male end of the termination.
- Slide the male end of the termination into the 87° vent pipe elbow.

---

**Pitch Termination at 3°**

- 1.25" (31 3/4 mm) to 2.5" (63 1/2 mm)
- min. 3° (=5/8”/ft) (15 7/10 mm)

Cover top of appliance to prevent debris from entering when cutting
First place inner wall plate to slide terminal through
10. Vertical Termination Installation

**Vertical Concentric Vent System**

**Identify the Vent Location**
- Determine the location where the roof discharge terminal will be installed.
- Taking into account the angle of the roof, cut the hole with a dimension that allows the vertical discharge roof terminal to be installed.

**Mounting the Vent System**
- Vent connections must be firmly pressed together so that the gaskets form an airtight seal
- Secure termination with supplied support clamp.
- Free standing components (i.e. above the roof) may not exceed a maximum vertical height of 59" (1.5m) without additional support.
- If shorter termination is required, refer to Section 2 for instructions.

11. Components
1. Condensate Collector and Trap

- Collector (100266140)
- Trap (100266139)

2. Concentric Sidewall Termination Kit

- 11 1/2" (292mm) (100266115)
- 21" (533mm) (100266117)

Includes: One Sidewall Termination, One 90° Elbow, Two Wall Plates

3. Concentric Roof Termination

4. 45° Elbow

(100266119)

5. 87° Elbow

(100266132)

6. Pipe Hanger

38" (965mm) Roof Termination (100266118)

Pipe Hanger (100266141)

7. Roof Flashing

- Flat Roof Flash (100266187)
- Tile / Shingle Roof Flashing
  1/12 to 6/12 Pitch (100266136)
  8/12 to 16/12 Pitch (100266137)
  6/12 to 12/12 Pitch (100266138)

8. Straight Pipe

- 10" (254mm) Straight Pipe (100266133)
- 19.5" (495mm) Straight Pipe (100266134)
- 39" (254mm) Straight Pipe (100266135)
